[Products](#)

Thoth tech creates tools that enhance education outcomes by empowering students, connecting them with tutors and facilitating personalised learning experiences. Our values describe how we work, what we represent, and guide us to be the kind of company and team members we want to be. When we live up to these values we will:

- Be people-focused We expect the best from each other, give each other the benefit of the doubt, encourage each other to take initiative to improve ourselves and the company, and provide direct and constructive help to each other. We collaborate with kindness while being respectful of each other.
- Uphold sustainable excellence We create working, maintainable, and understandable software that is enjoyable and easy to use.
- Be inclusive and supportive We celebrate diverse perspectives and embrace uncomfortable ideas and conversations.

# Our Products

These are the projects that are currently under development at Thoth tech

## Splashkit

a C++ Software Development Kit. It is beginner-friendly to assist in introductory programming education, and can be used to create 2D games.

## OnTrack

an innovative Learning Management System that is designed for a skill-based course delivery model.

## Art Gallery

a digital art gallery platform for the displaying and enjoying of art.

## CourseFlow

This project aims to assist students and course directors in course planning and in comprehending the requirements of certain courses

## Operations

a dedicated team for monitoring the other products and making their jobs easier through research documentation.

### About us

This team oversees the entire operations of Thoth Tech and strives to make things easier. We aim to make the onboarding process as smooth and clear as possible, as well as increase the knowledge of our seniors in meaningful ways while creating policies to improve the well being of all company employees. In the short term, we would like to create new documentation, policies, workflows, and processes that are relevant to improve the company's outlook and overall productivity. In the long term, we aim to store documentations in a dedicated website(Docusaurus) to make it easy to push updates, new features, and bug fixes to everyone without the need to gain access to our GitHub repository.
